

# What's Next for the Intermodal Evolution?

**C**hassis innovator **CIE Manufacturing** has kept pace with the ever-evolving needs of intermodal shipping by keeping a laser focus on quality and value. As an industry leader, CIE has invested in new, strategically located North American manufacturing facilities and is ready with the capacity chassis operators need.

The world's largest chassis manufacturer isn't resting on its laurels. CIE has built three new manufacturing locations on both U.S. coasts and in Canada. This multi-million-dollar investment was made to create capacity for tomorrow's intermodal chassis demands.

## What's that going to look like?

Chassis users need reliable, technology-enabled, and efficient equipment to support the more resilient and greener supply chains of the future. CIE is ready with:

- Standard 5-year warranties plus after-sales support
- Durable, robotically welded, North American-made chassis
- Remote monitoring technology compatibility
- Radial tires
- Environmentally friendly, long-lasting KTL paint
- Modern, new manufacturing capacity
- Best-in-class componentry
- CIE replacement parts

Experienced chassis users understand that their equipment lifecycle costs begin with the initial acquisition. Chassis are a long-lived asset and experience weather extremes, rough handling, and operations that can span hundreds of thousands of miles. Unreliable or unsupported equipment can quickly incur more expense than any variance in acquisition costs.

## Ready for future growth

CIE has built its reputation on the durability of its chassis, its strong customer support, and its long-term commitment to the market. Customers know CIE will be there when it's most needed to keep equipment moving, and to respond quickly when and where necessary.

The CIE manufacturing team is 300 strong, including in-house logistics, engineering experts, dedicated customer support, and skilled craftsmen. Chassis are delivered on-time, within budget, and ready to roll.

CIE is leading the intermodal evolution and ready for your next chassis procurement.
